Hello!

I noticed that one of the highest rated games on the app store is a game called **HTD**

From all the information I've noticed regarding the developers project of the game they seem to be a group of cross platform open-source developers who are located in Germany. It has a really great look like TF2 and appears to be a very well made game with a great German community.

I have created a little teaser video that shows how the game looks like and what's it a bit like.
