•To simulate this war of lightning advancement, we have decided to depart from the 'normal' working principle of a turn-based game (at least for that period of the war), and adopt a continuous turn structure (each turn represents a day) to prevent the fighting to be too slow or too fast. •We have opted for a simple logistics system that allows the scenario-developers to modify the actual supplies for different unit types, and/or to simulate a damaged supply line that slows down the progress of the attacking army. •The cards can be considered as 'sub-commands', each with one of the three roles: military, diplomatic or economical. These cards can be considered as 'sub-divisions' of the civil cards. •The gameplay is based on a typical solitaire system, where each player/army must have his/her cards within sight (same way as the official GMT rules). •The victory conditions are no less complex than usual, with numerous different paths to conquer and/or defend. •The game can simulate either a moderate or a large scale conflict, from a few days to a few months. The parameters can be altered freely (set several scenarios for the time frame) by the scenario developer. •The game uses a production mechanic based on a drafting mechanic, allowing to draw the units and other parameters that are needed. •We would like to demonstrate that we are more than capable of creating interesting and innovative games, and have no intention of following traditional rules at the expense of gameplay diversity. The scope of the game should be large and allow a strategic gameplay, while maintaining the necessary continuity and elegance. As always, when developing a game, we are fully conscious of the fact that these projects are never perfect and that we are constantly evolving them to make them better. What's new:

Warning: this article includes details of the game's incredibly depressing conclusion. You have been warned. Living up to the hype One of the nicest things that Life is Strange's debut on PC has done is done something that I haven't seen in a long time: It really has gripped you emotionally, despite my warning above. The story's entirely unique and fun, featuring a charming cast of characters, gorgeous cutscenes, intriguing trappings and interesting worldbuilding, all of which merge together to make the best sort of game: one that, despite its flaws, isn't merely charming but an achievement in and of itself. So how did it all go so wrong? Two episodes in, it's already clear we're about to experience the perfect storm: the first time Life is Strange plays Destiny's Child-style and marries investigation with a western-style story, allowing for character development and uniqueness, only to throw in contrast the push towards the standardised gameplay it has pioneered. It's a fantastic fusion of elements in itself, but a rushing and haphazard attempt to do just that – plus adding a massive hack from the original concept's second episode – actually smashes it into the ground and erodes its success. OK, already we're talking past it. That's because it's not the story that makes me angry – it's the grim, unique, enticing story I've been experiencing so far. That doesn't just turn into glorified RPG grinding, which is weird given I'm talking about Max Caulfield. The story has an intriguing atmosphere, and I have just as much empathy for Rachel Amber as I do Max (who, after all, I managed to save). And because the plot and character beats play out organically, I got truly invested in things like finding out why Rory has always been so different, why she wants to die, why she tries and fails to get Tess killed, and why she's carrying a time bomb around, meaning she ended up getting killed anyway. Well, dying, at least. That, in turn, just had me saying to myself, "Why, Max? Why are you doing this?" And that's the problem: Even if I'd already decided I was going to end up as a stone-cold murderer (
