

cons: i received 4 240gb drives to act as my backup and then 4 240gb drives to create the volume. had to buy 6 power supplies, 4 being green, 2 being black. some of the cables were a bit long so it would not fit in my server room. i did not care for the colorful cables so i just changed it out to an all black set (the original cables i received had in fact been black, but had been exposed to bright lights at the store). bottom line: this thing is just great. i do like the fact that i can change the name and hide the drives from windows completely. it is nice to have the extra space for my files and be able to back up. i went back in an forth between myraid and this card a couple times trying to find an easy way to create my volumes without feeling like i had to be constantly reinstalling windows xp so i am glad to have found this card. it does require a lot of work, but it is worth the effort. i have not had a problem with the raid 5 array, even with all the spinning of the disks. prime time + iunlock are really a great combo! i didn't expect to get anything for free though, i thought the cost of the combo was too high so when i first started i was just going to try to get the cheapest compatible card out there. then i read about prime time i got all excited, but it seems they're like ccids in that you have to pay for the ccid, i honestly had no idea that was possible (and it turns out it is in fact possible). so i was pleasantly surprised to find out that the prime time i had was actually the one's that are unlocked! so i got everything working, and i was able to install

---

windows 7 64-bit with my card!

## Amcc Powerpc Ppc405cr Drivers

what we are looking for on this site is not what you "should" be doing, but what you "can" be doing. all of us here can improve our gaming experience with a piece of software or change our interface a little. so what are you waiting for?! our reviews are based on gaming tests which are performed on both the ps2 and psp using the ps2 and psp emulators. all of the testing involves testing under the same conditions including resolution, frame rate, and pc performance. fastclock is limited in execution speed and cycle accurate emulation can only be achieved if the device is operating at a higher clock rate than the emulation software. for example, a 700mhz power on reset ppc405dx begins emulation at 700mhz. there is no way for the emulator to increase the clock rate. for best results, set 'emulated\_frequency\_multiplier' to 100 in sys/rc.c, or run at the maximum clock rate possible. power4, dec / powerpc, arm (r) is a family of general purpose microprocessors developed by digital equipment corporation. it is intended for embedded applications such as routers, networking, telecom, servers, scientific workstations, and hand-held devices. power 4 processors include the power4+ and power4- processors, which were first introduced by digital in the mid-1990s. power 4+ is digital's first cpu based on a newly developed architecture called power architecture 8 (pa-8), while power 4- is based on pa-7. the power4- class processors are a subset of the power4+ family. the available selection also includes the power4+, power4+, and power4- single-chip processors, used in pocketpc and network appliances. 5ec8ef588b
